SINGLE EARLY TULIP
PINK BEAUTY

BULBS FOR WILD GARDENS AND NATURAL PLANTATIONS.

THE WILD GARDEN is nearer to nature than any other style of garden. It is simple, inexpensive, permanent, and being arranged on nature's plan it is not readily destroyed by occasional neglect.

ITS SUBJECTS are the best of our native plants and plants allied to them from countries having climates similar to our own. From northern Japan, Siberia, northern Europe and the mountainous parts of southern Europe, there have been obtained many plants adapted to the American Wild Garden.

Among hardy herbaceous plants the Asclepias, Asters, Boltonias, Campanulas, Columbines, Dictamnus, Epilobium, Echinops, Day-Lilies, Lobelias, Lythrum, Monarda, Evening-Primroses, Rudbeckias, Stokesia, Thermopsis, are a few of the many available. We shall be pleased to furnish a larger list with prices upon application.

The following bulbous plants are especially suitable for natural plantations, and when once planted hold their own and increase with little or no further care.

FARQUHAR'S HYACINTHS

CULTURE OF HYACINTHS.

HYACINTHS IN POTS. It is important in the pot culture of the hyacinth to have rich, light soil—if possible, a compost of one-third decayed turf, one-third old rotten cow manure, and the remainder equal parts of sharp sand and leaf-mould. This compost should be made a few weeks before being used. If the bulbs are to be potted singly, pots five inches in diameter are the proper size, and the special Hyacinth pots, which are about two inches deeper than ordinary pots, are preferable. Cover the hole in the pot with a piece of broken pot, and over this place a layer of moss, which will keep the soil from clogging the drainage thus provided. Break off any offsets which appear at the base of the bulbs, and in potting place each bulb so that its top shall be half an inch below the surface of the soil and an inch below the rim of the pot. The soil should be of usual natural moisture, and should be pressed moderately firm. The filled pots may be placed in a cold frame where there is protection from frost, and well watered. An excellent plan is to place them on a bed of moist, sifted coal ashes, covering the pots to a depth of six inches with the same material. When well rooted, which will be in about six weeks, the bulbs may be brought indoors and forced. For the first two or three weeks they should be kept in a temperature not exceeding 50 degrees. Success in forcing depends much on their having strong roots before being brought to the light. The top grows rapidly, and unless the roots are started much in advance they are unable to nourish the plant, and failure results.

Hyacinths for early use may be potted in September or October; late planting is not advisable, as the bulbs deteriorate; when desired for late use, it is better to pot them in October and keep them in a cold frame above freezing until it is desired to force them into bloom.

To obtain dwarf foliage and fine flower spikes, Hyacinths when being forced should have plenty of manure-water, fresh air, and should be kept very near the glass. The blooms last much longer if shaded from the sun.

Hyacinths in Glasses. The single varieties are, with a few exceptions, best adapted to this mode of culture; they produce finer flower spikes than the double.

Fill the glass with clear, soft water, so as nearly to touch the base of the bulb, putting a small piece of charcoal in each glass to keep the water pure, and afford some nourishment. The filled glasses should be placed in a dry, cool, dark place, and kept there until the roots almost touch the bottom of the glass, when they may be exposed gradually to the light. If the water in the glasses becomes foul, or diminished, replace it with fresh water at about the same temperature as the atmosphere in which the bulbs are growing; otherwise it need not be changed.

When well started, the bulbs should have plenty of light and air, without draughts, in order that the best development and brilliancy of color may be attained.

Hyacinths in the Open Garden. The ground should be dug to a depth of at least fifteen inches, and enriched with plenty of well-rotted cow manure.

Hyacinths may be planted from September until winter sets in; although if the highest success is sought they should be in the ground by the end of October. Bulbs planted early develop roots in the autumn, and these, if protected from injury by freezing and thawing alternately during the winter, enable the bulbs to produce much larger flower spikes than if the roots are not developed until spring. Frost reaching the bulbs raises them up, thus detaching them from their roots. Protection may be afforded by covering the beds with straw or leaves to a depth of six or eight inches, which should be removed early in the spring. Hyacinths should be set six inches below the surface of the ground and six inches apart.

FARQUHAR'S EXTRA LARGE NAMED BEDDING AND FORCING HYACINTHS.

The Reduced Price at which these Hyacinths are offered this year makes them attractive for out-door bedding and winter forcing.

Average circumference 7 to 8 inches, except Yellow, which produces smaller bulbs.

This highly decorative class of Hyacinths is of unsurpassed excellence for producing fine color effects in public parks and private grounds. Being of distinct and decided shades, of almost uniform height, and blooming at the same time, they admit of the most artistic grouping. They are also very desirable for forcing singly in pots or grouped in bulb pans.

LARGE UNNAMED HYACINTHS FOR BEDDING AND FORCING.

These are well developed, sound flowering bulbs, superior in size and strength to the Mixed Hyacinths usually offered. Choice sorts only are included in these selections which are grown separately and put together in variety of shades of each color. Care is exercised to include only sorts which bloom at the same time and are of nearly uniform height.

EARLY ROMAN HYACINTHS.

White Roman Hyacinths.

MINIATURE HYACINTHS.

These are most fascinating both for forcing in pans, and for outdoor bedding and are gaining in popular favor each year.

- Pure White.** 40c. per doz.; \$2.50 per 100; \$20.00 per 1,000.
- Blue.** 40c. per doz.; \$2.50 per 100; \$20.00 per 1,000.
- Red.** 40c. per doz.; \$2.50 per 100; \$20.00 per 1,000.
- Mixed Colors.** 40c. per doz.; \$2.50 per 100; \$20.00 per 1,000.

HYACINTHUS CANDICANS.

A showy, hardy plant, blooming in July and August, and producing spikes about three feet long, crowned with numerous large, pendant, bell-shaped, pure white blossoms.

Large bulbs, per dozen, 30 cents; per 100, \$1.75; per 1,000 \$12.00.

FEATHERED HYACINTHS.

Beautiful, hardy, early-flowering bulbs, succeeding in almost any soil and situation.

Feathered Hyacinths. Violet; long, feathery plumes, per dozen, 30 cents; per 100, \$2.00.

THESE beautiful Hyacinths are indispensable to the florist in his autumn and winter cut-flower work; while to the amateur they are among the most easily cultivated and most satisfactory of flowering bulbs. The white variety, if planted early in September and gently forced, will bloom in November; the others require from two to three weeks longer.

When grown in pots or pans they are most effective planted in groups of six or more bulbs in each.

- White. Extra Large.** 50c. per doz.; \$4.00 per 100; \$35.00 per 1,000.
- White. Mammoth.** 75c. per doz.; \$5.00 per 100; \$47.00 per 1,000.
- Pink.** 50c. per doz.; \$4.00 per 100; \$35.00 per 1,000.
- Light Blue.** 50c. per doz.; \$4.00 per 100; \$35.00 per 1,000.
- White Italian or Parisian.** These are about a fortnight later than the Early White Roman Hyacinths and the blossoms somewhat larger. They are very useful for forcing, being fragrant and decorative. 50c. per doz.; \$4.00 per 100; \$35.00 per 1,000.

SINGLE EARLY TULIPS.

FARQUHAR'S RAINBOW MIXTURE. (Trade-mark Registered.) The varieties included in this mixture are grown separately, and are all popular large-flowered bedding sorts of decided merit. The colors are carefully proportioned, and include white, yellow, pink, scarlet, crimson and many beautiful shades and combinations of these colors. The sorts are selected to flower at nearly the same time and with slight variation in height. For massed beds and grouping, our Rainbow Mixture is unsurpassed. The bulbs offered are of the largest size and finest quality. **Per doz., 35 cents; per 100, \$2.50; per 1,000, \$20.00.**

Farquhar's Rainbow Mixture Single Early Tulips, at the Harvard University Botanic Garden, Cambridge, Mass.

HARVARD UNIVERSITY BOTANIC GARDEN, CAMBRIDGE, MASS., July 9th, 1908.

MESSRS. R. & J. FARQUHAR & CO., Gentlemen:—It gives me great pleasure to certify that I have grown your Rainbow Mixture for many years. It has always given most satisfactory results. Its greatest merit lies in the pleasing harmony of colors, the uniform height of the plants and all blooming at the same time. There is nothing better for large beds or for massing effects.

Yours respectfully,

ROBERT CAMERON.

SINGLE MAY-FLOWERING OR COTTAGE GARDEN TULIPS.

THE May-Flowering Tulips are usually in full bloom about Memorial Day and generally last well into June. Not only do they prolong the Tulip season but in grandeur of form and richness of their colors surpass most of the earlier classes. They are splendid subjects for natural plantations, for clumps in herbaceous perennial borders as well as for formal beds. For cutting they are even better than the early tulips—the flowers being stronger and lasting longer.

DARWIN LATE SINGLE TULIPS.

THE colors range from the palest lilac to purplish black, including shades of rose, scarlet, crimson, violet, brown, white, etc. The Darwin Tulips are the strongest race of all, their massive leaves being often eight inches broad and their splendid flowers two to three feet in height. They bloom with the Columbines, three or four weeks after the Single Early Tulips. Clumps of them along the edge of shrubbery and in hardy plant borders are very effective. They are especially beautiful when cut for vases.

CROCUSES.

THE bulbs should be set three inches deep, and should be planted in October or early in November to insure success. They are very effective when combined with Snowdrops, Scilla Siberica, Chionodoxa Lualliaë, Daffodils, and other Spring flowers. Crocuses may also be grown indoors either in pots or bulb pans in loam, or in dishes filled with wet moss in which the bulbs are set closely, half an inch below the surface.

POLYANTHUS NARCISSUS.

Polyanthus Narcissus, Early Large, Paper White.

A VERY decorative class of bulbous plants for greenhouse and window cultivation, but not hardy out of doors in our climate. They produce enormous trusses of delicately fragrant flowers, varying in color from snowy white to deep yellow. Treat the bulbs in the same manner as noted for Hyacinths, except that the bulbs should be set half an inch deeper in the soil. They may be easily and quickly forced; our florists frequently have them in bloom by Thanksgiving.

NARCISSUS JONQUILLA OR JONQUILS.

The delicately graceful forms, delicious fragrance, and deep yellow color of their blossoms have made the Jonquils favorites of the amateur and necessities with the florist. They are easily forced, and if started early may be flowered by Christmas, or even earlier. Plant six or eight bulbs in a six-inch bulb pan, covering the crowns half an inch, and treat them in the same manner suggested for hyacinths.

NARCISSI OR DAFFODILS.

A Natural Plantation of Narcissus Poeticus.

For Natural Plantations. This is the day of the natural garden and the Daffodils are among its most charming subjects. Once planted there is no limit to their existence and they improve and multiply each year, provided they are replanted when after several years they become too crowded. There is not a single sort in the entire list that may not be advantageously used. The accompanying illustration shows a natural border of Poeticus, one of the cheapest, yet most fascinating Daffodils. Other inexpensive forms suitable for such massing are Barri Conspicuous and many of the Leeds and Incomparabilis sections, while the large trumpet varieties, many of which are likewise inexpensive, may be planted in comparatively small clumps with good effect. Each clump or mass should be of one variety—they should not be mixed—but the effect of planting a number of kinds each in a separate clump is most pleasing and extremely interesting.

For Formal Beds. The Daffodils are charming, too, planted in beds, especially when combined with an undergrowth of the blue Scilla Siberica, Forget-me-not, or other dwarf spring flowers. They should be planted in October or early in November. The bulbs should be set from four to five inches deep; the larger sorts five or six inches apart and the small varieties three to four inches. They should never be planted in very windy situations.

For Clumps in Hardy Plant Borders. Groups of Daffodils in borders of hardy herbaceous plants and along the edges of shrubbery beds are exceedingly effective and delicately beautiful.

For Greenhouse Culture. The commercial florists have been foremost to give the Daffodils the attention due them. They have learned how easily and successfully these lovely flowers may be forced into bloom during winter (even as early as Christmas), and how fascinating and lasting are the blossoms. They may be planted in pots or bulb pans six inches or more in diameter, several bulbs in each, according to size, and treated in the same manner as Hyacinths.

Narcissus Glory of Leiden.

FOR cutting purposes there is no more lovely class of flowers than the Large Trumpet Daffodils, whether grown in the greenhouse during winter or in the open garden in spring. The sorts most generally grown for this use are Emperor, Empress, Golden Spur, Horsfieldi, Princeps Maximus and Trumpet Major; all the varieties, however, are suitable. Glory of Leiden is the largest of all and is of rich pure yellow. At the Spring Exhibition of the Massachusetts Horticultural Society last season it stood out conspicuously from all the others and easily took first place.

CORBULARIA OR HOOP PETTICOAT
NARCISSUS.

Bulbocodium. (*Yellow Hoop Petticoat*.) Dwarf variety with deep golden-yellow flowers, a number of which are produced by each bulb. It is very pretty when forced; ten to twelve bulbs in a six-inch pan. It is also charming for edges of beds, and is very hardy. Per dozen, 85 cents; per 100, \$5.50; per 1,000, \$45.00.

MEDIUM TRUMPET NARCISSI.

This class includes many of the most beautiful and useful Daffodils, with flowers often from three to five inches across. The characteristic feature of this section is that the trumpet is usually half the length of the divisions of the perianth, giving the flower a very refined form. In flowering they follow the Large Trumpet Narcissus. They are equally desirable for open-ground cultivation and forcing in the greenhouse or window.

CHINESE SACRED NARCISSUS.

Joss Flower or Oriental New Year's Lily.

These may be grown in pots of earth, but are more interesting and very satisfactory in bowls partially filled with pebbles and water. As the roots develop they form a network about the pebbles, thus supporting the plant when in bloom. They should be started and grown in bright light, but carefully protected from draughts. The flowers are mostly white with yellow cups and are very fragrant.

Narcissus Sulphur or Silver Phœnix

A formal Bulb Garden at North Easton, Mass.

LILIES FOR FORCING.

THE bulbs may be potted from August onward in a compost of equal parts turfy loam, leaf mold, rotten cow manure, and sand. It is best to start them in pots not exceeding twice their own diameter, in which they may remain until started eight inches or more. They should be transferred then to larger pots in which to bloom, exercising great care not to disturb the roots or break away the soil from about them, and setting them considerably deeper in the larger pots. This method prevents the soil from becoming sour, and enables the roots forming at the base of the stem to become feeders, greatly increasing the number and size of the blossoms.

Lilium Candidum.

LILIES FOR THE OPEN GROUND.

Lilium Auratum.

THE increased production of many varieties of these in Japan has greatly reduced their cost, and in consequence their use has become very general.

It is our opinion that we should plant the bulbs much deeper than we have done heretofore. While travelling in Japan, we found that the bulbs of the wild Lilies were usually twelve to eighteen inches below the surface, and we gathered the finest flowers from specimens growing on mountains of decaying lava where they had abundant rainfall and ample drainage. We believe that varieties like *Auratum* and *Speciosum* would be favored by being set ten or twelve inches deep and would be less affected by frost and drought. The beds should be thoroughly covered with leaves or litter during the winter.

Many of the late flowering sorts cannot be shipped from Japan until October; persons desiring to plant in the autumn should therefore prepare the beds and cover them with leaves to prevent the ground freezing until the bulbs arrive.

OUR NATIVE LILIES,

as shown in the accompanying illustration, are best for producing natural effects. They thrive in moist soil or where there is partial shade, and for such situations no flowers are more satisfactory. Once planted, they care for themselves.

The shrubbery is an ideal place for Lilies, their flowers coming when most of the shrubs are out of bloom. *Lilium superbum*, *Canadense* and *Philadelphicum* are suitable for shrubbery planting as well as the Japanese *Elegans* varieties and the *Tiger Lilies*. These should be planted in clumps 6 to 8 inches deep and the bulbs 6 inches apart.

GERMAN IRISES. (*Iris Germanica. True Fleur-de-Lis.*)

IRISES require rich soil and abundance of water. The finest blooms are obtained from established clumps; consequently when planted they should remain undisturbed. Set the roots in clumps of three or more, four inches deep, and protect with leaves or other mulch during winter. We advise early autumn planting.

AMARYLLIS.

IN order to obtain fine specimens of Amaryllis the following method should be followed: On receipt of the bulbs in the autumn they should be placed where they will be always slightly moist and warm, under the benches of a greenhouse, for example; do not pot up the bulbs before the flowerbuds appear; when first potted give very little water, and promote growth by giving moderate bottom heat; increase the supply of water as the plants progress. Very often the mistake is made that bulbs are potted up too early; the consequence is that only leaf growth is made. The proper soil for Amaryllis is turfy loam enriched with rotten manure.

LILY OF THE VALLEY.

(*Convallaria.*)

FOR open ground planting we offer large clumps, each containing many flowering crowns. These may be set from six inches to a foot apart and covered three inches. They succeed best in ground which is rather moist and partially shaded.

For forcing the Pips are to be preferred, being grown under conditions tending to promote vigorous and early blooming. Twelve to eighteen pips may be planted in a 6-inch pot, with all the fibrous roots carefully preserved, and keeping the crowns above the soil. Place them in a temperature of about 80 degrees, cover the crowns with loose moss, and keep them constantly moist with tepid water. They should flower in about five weeks. **Ready for delivery in November.**

WATSONIA ARDERNEI.

This new white variety was recently introduced from South Africa and is likely to become very popular. The bulbs resemble gladioli, sending up stems to a height of 3 to 4 feet, each stem bearing about a dozen snow-white flowers. Fine for forcing in the greenhouse or planting out doors in spring like the gladioli. Each 50 cents; dozen, \$5.00.

HARDY PERENNIAL PLANTS.

OLD-FASHIONED HARDY GARDEN FLOWERS.

Farquhar's Hybrid Pyrethrums in the Famous Italian Garden of Larz Anderson, Esq., Brookline, Mass.

THE favorites of the old-time gardens are coming to the front, and deservedly so. No feature of the garden can be more satisfactory than a well-arranged Hardy Plant border, producing from April to November a continuous succession of charming flowers, much more interesting than the usual greenhouse assortment, and equally valuable for garden embellishment and cutting purposes. The Hardy Plants have the advantage of greater permanency, requiring only cultivation, enriching, a slight mulch during winter, and occasional checking of the more robust growers, to keep the plantation in good condition for years.

Where early flowers are desired we advocate the introduction of groups of Narcissi, Scillas, Crocuses, Snowdrops, Chionodoxa and other Spring-flowering bulbous plants, which should be planted in October, as well as Montbrietias, the hardier species of Gladioli and Lilies for summer blooming, and which may be planted in spring.

We limit the present list to varieties which admit of being planted at this season and which have been found generally hardy and desirable for the severe climate of New England.

FARQUHAR'S COLLECTION OF HARDY FLOWERS.

FARQUHAR'S EVERGREEN LAWN GRASS.

LAWNS AT THE JAMESTOWN EXPOSITION
 SEEDED WITH
 FARQUHAR'S EVERGREEN LAWN GRASS

FARQUHAR'S EVERGREEN LAWN GRASS is a mixture of the finest American and European grasses adapted to lawn-making. The formula for this mixture is the result of life-time practical experience in making and maintaining lawns. Neither pains nor expense are spared in obtaining grasses of high vitality and purity. It is our constant aim to make Farquhar's Evergreen Lawn Grass the best, purest and most permanent Lawn Grass sold.

One quart will sow 300 square feet. Price per quart, 25 cents; by mail, 30 cents.

Four quarts will sow 1,200 square feet. Price, 75 cents; by express only.

One peck will sow 2,400 square feet. Price, \$1.25; by express only.

One bushel (20 lbs.) will sow 10,000 square feet. Price, \$5.00; by express or freight.

Four bushels (80 lbs.) will sow one acre.

R. & J. Farquhar & Co., Boston, Mass.

Weld Garden, Brookline, Dec. 7, 1907.

Gentlemen:—It gives me great pleasure to inform you of the good results I have had with your Lawn Grass Seeds.

I have used them extensively, not only in Massachusetts but in Washington, D. C., and in St. Louis, Mo., at both of which places there is difficulty in getting good Lawns, and where the successful results from your seeds have been remarkable.

The Weld Garden in Brookline which has been so frequently described and illustrated in the leading periodicals of the country affords the very best evidence of the high quality, purity and permanence of your Lawn Grasses.

Your Mixtures for various situations and for different parts of the country, I consider especially valuable.

Yours truly,

Duncan Finlayson.

NEW BOSTON PARKS LAWN SEED.

We received from Messrs. Olmsted, Olmsted and Eliot their formula used in seeding the beautiful lawns of Boston's new parks. Franklin Park and the Metropolitan parks were planned by this firm of eminent landscape architects, and their formula may be accepted as the best which experience can suggest for park lawns.

62 lbs., sufficient for one acre (43,560 square feet) . . .	\$16.00		16 lbs., sufficient for one-quarter acre (10,890 square feet) . . .	\$4.50
31 lbs., sufficient for one-half acre (21,780 square feet) . . .	8.00		1 lb., sufficient for 700 square feet, \$0.35; by mail45

Mr. Alexander Main, Farmington School, Conn., writes:—"Without doubt the New Boston Parks Grass Seed is the seed to make a nice green lawn. I recommend it to any one who desires to get a satisfactory lawn."

FARQUHAR'S SPECIAL GRASS SEED MIXTURES.

Messrs. R. & J. Farquhar & Co., Boston, Mass.

Bretton Woods Golf Club, Bretton Woods, N. H.

November 13th, 1907.

Gentlemen:—I have used your Lawn Grasses for the past eight years and have found them of extra fine quality and entirely free from foul seeds. Your Putting Green Mixture is the finest I have ever seen—the greens at Bretton Woods produced from it are unrivalled.

Yours truly,

G. S. MERRITT, Prof. Golfer.

FARQUHAR'S FAIR GREENS MIXTURE.

This is composed mainly of perennial native grasses and two very important European grasses which have proven of great value for Fair-Green use. They are all of dwarf, spreading growth, forming a close velvety surface which improves from year to year if given proper care. It contains no clover, which is objectionable on account of making the surface slippery. If white clover is desired, the quantity sown should not exceed one-half pound per bushel of grass seed. Per lb., 20 cents; per 100 lbs., at 18 cents per lb.; per 1,000 lbs., at 16 cents per lb. Sow 50 lbs. per acre.

THE FOLLOWING SPECIAL GRASS SEED MIXTURES,

Quart, 35 cents; by mail, 45 cents; peck, \$1.50; per bushel of 20 lbs., \$6.00.

FARQUHAR'S PUTTING-GREEN MIXTURE.

The hardiest and finest low growing Grasses are contained in this Mixture. It produces a beautiful and lasting green turf calculated to withstand hard tear and wear.

FARQUHAR'S TERRACE MIXTURE.

A mixture of strong, deep-rooted Grasses for banks or terraces. Although the Grasses are strong and deep-rooted, they will produce a fine green velvety surface, and also prevent washing away during heavy rains.

FARQUHAR'S MIXTURE FOR SHADY PLACES.

This is a mixture of extra fine grasses adapted for growing in the shade and under trees. We recommend the use of this mixture wherever other grasses, on account of shade, have failed to make a close sward.

Mrs. W. V. Chapin, Pomfret, Conn., writes:—"Some grass seed bought of you last spring has been wonderfully fine. I wish you could see my thick, green, grassy walk, 1,200 feet long, under some apple trees. This 'St. Dorothy's' path is along a stone wall, and hardy perennials are opposite side from apple trees, and your grass seed made a beautiful path even this first year."

FARM AND FIELD GRASSES.

Prices Subject to Market Fluctuation.

Timothy.

Timothy or Herds Grass. *Phleum pratense*. This Grass is usually considered and treated as a short-lived perennial, and hence is the best grass to grow in a short rotation. It succeeds best on moist loams and clays naturally rich in humus or on those which have been heavily manured. It grows in loose tufts, with few short leaves, so that Red Top or Red Clover should be sown with it to furnish heavy bottom growth of leaves. Sow one-half bushel per acre if alone. (45 lbs. per bushel.) Per bushel, \$3.25.

Red Top. *Agrostis vulgaris*. A good permanent grass, which grows naturally in cold, wet soils. It should be grown in cultivation in similar situations. A perennial with long creeping stems and underground runners; one of the best bottom grasses bearing large numbers of fine root leaves, making it invaluable for sowing with erect tufted Grasses, such as Orchard and Timothy filling in between the clumps and producing a continuous turf. Sow four bushels per acre if alone. (10 lbs. per bushel.) Per lb., 15 cents; per bushel, \$1.25; 100 lbs., \$10.00.

Red Top. Clean Seed. Chaff and weeds sifted out; pure fancy seed. We recommend this to all who desire the best results, as its absolute purity and excellence insure satisfaction for farm, park or lawn. Excellent for restoring worn-out swards. Per lb., 20 cents; 100 lbs., \$15.00.

Kentucky Blue. *Poa pratensis*. Known as *June Grass*. A perennial especially adapted to dry limestone soils, but will thrive on any good ground which is not too wet. Very nutritious, hardy, and early. Sow three bushels per acre if alone. (14 lbs. per bushel.) Per lb., 20 cents; 100 lbs., \$18.00.

Rhode Island Bent. *Agrostis canina*. A bottom Grass, suitable for using with tufted varieties. Hardy and early and a grass that will withstand heat and dry weather. Sweet and nutritious and relished by all kinds of stock. Sow four bushels per acre if alone. (10 lbs. per bushel.) Per lb., 30 cents; per bushel, \$2.50; 100 lbs., \$23.50.

Orchard. *Dactylis glomerata*. A deep rooted perennial, growing in tufts. A strong, vigorous grower, which succeeds best on rich lands or clayey soils. Should be cut for hay at the time of first flowering. Sow three bushels per acre if alone. (14 lbs. per bushel.) Per lb., 25 cents; per bushel, \$3.00; 100 lbs., \$20.00.

Tall Oat Grass. *Avena elatior*. A perennial which grows in loose tufts and throws up an abundance of leaves and tall stalks. Succeeds best on rich upland soils, and when once established is a great drought resister. Early. Makes its heaviest growth the second year. Lb., 35 cents; 100 lbs., \$25.00.

Italian Rye Grass. *Lolium Italicum*. A biennial which grows in broad compact tufts, producing a large number of stalks from a single root. Succeeds best in warm, rich, moist soils. A rapid grower and a good crop to rid land of weeds, as it quickly overtops them, preventing them from ripening seeds. Sow three bushels per acre. (22 lbs. per bushel.) Per lb., 15 cents; 100 lbs., \$9.00.

Perennial Rye Grass. *Lolium perenne*. A perennial forming large and broad tufts. Grows best on stiff, wet soils, and on heavy clays or marshy lands where the soil is good, it is one of the best pasture Grasses. In such situations it will last five to seven years, but on dry upland soils it is short-lived. (22 lbs. per bushel.) Finest seed, our direct importation. Per lb., 12 cents; 100 lbs., \$8.50.

- Meadow Fescue.** *Festuca Pratensis.* A perennial which succeeds best on rich moist loams. A heavy yielder on soils perfectly adapted to it, and also an excellent pasture Grass. Sow two and a half bushels per acre. (15 lbs. per bushel.) Per lb., 30 cents; 100 lbs., \$21.00.
- Various Leaved Fescue.** *Festuca heterophylla.* Early hardy perennial two or three feet high. Valuable for permanent pasture. Thriving in high altitudes and in shady locations. Per lb., 35 cents; 100 lbs., \$28.00.
- Hard Fescue.** *Festuca duriuscula.* This splendid Grass is found in all the best lawns and permanent pastures; invaluable for dry soils; of low, dense-growing habit. Sow three bushels per acre. (14 lbs. per bushel.) Per lb., 20 cents; 100 lbs., \$16.00.
- Red or Creeping Fescue.** *Festuca rubra.* A splendid grass for light sandy soils. Extreme drought resister. Valuable in seeding banks and exposed locations, binding drifting sands, and as lawn grass for shady spots. Forms a very close, durable turf, suitable for putting greens. Lb., 30c.; 100 lbs., \$25.
- Sheep's Fescue.** *Festuca ovina.* Of dense growth; excellent for dry situations and sheep pastures. Sow two and a half bushels per acre. (12 lbs. per bushel.) Per lb., 20 cents; 100 lbs., \$14.00.
- Fine Leaved Sheep's Fescue.** *Festuca ovina tenuifolia.* A very fine leaved Grass, dwarf in habit. Will succeed in dry, high locations and inferior soils. Hardy and durable. Per lb., 40 cents; 100 lbs., \$35.00.
- Tall Fescue.** *Festuca elatior.* Excellent for permanent pastures on moist soils, on which it yields immensely. Cattle and stock eat it greedily. (15 lbs. per bushel.) Per lb., 40 cents; 100 lbs., \$35.00.
- Crested Dog's Tail.** *Cynosurus cristatus.* A perennial valued for its dwarf habit and its hardiness. Sow two bushels per acre. (28 lbs. per bushel.) Per lb., 50 cents; 100 lbs., \$45.00.
- Sweet Vernal, True Perennial.** Many seedsmen substitute the annual variety for this invaluable Grass, as the seed of both is similar. Invaluable in lawns on account of its very early growth and fragrant odor, which it imparts to the other grasses in drying. Remains green very late. Hardy and permanent. Per lb., 80 cents; 100 lbs., \$75.00.
- Meadow Fox-Tail.** *Alopecurus pratensis.* Very valuable in mixtures for permanent pastures exposed to heat and drought; early and rapid in growth. (8 lbs. per bushel.) Per lb., 50 cents; 100 lbs., \$45.00.
- Rough-Stalked Meadow.** *Poa trivialis.* An excellent permanent Grass to mix with other varieties for moist pastures. Produces a constant supply of nutritious herbage. Suitable for growing in shade. Sow one and a half bushels per acre. (14 lbs. per bushel.) Per lb., 50 cents; 100 lbs., \$40.00.
- Wood Meadow.** *Poa nemoralis.* Well adapted for growing under trees and in shaded situations. Dwarf and fine growing. Sow two and a half bushels per acre. (14 lbs. per bushel.) Per lb., 70 cents; 100 lbs., \$60.00.
- Water Meadow Grass.** *Poa aquatica.* A creeping rooted perennial, grows in alluvial marshy soils, slow running streams, margins of fresh water, lakes, etc. An excellent pasture grass for wet situations. Trout and wild duck relish the seeds and young shoots as food. Per lb., 50 cents.

CLOVERS.

- Red Medium.** *Trifolium pratense.* The best clover for all practical purposes. Succeeds best on rich warm loams, containing humus. Lime and potash are essential for its best development. A biennial, but by close pasturage may be made to last several years. Per lb., 30 cents; 100 lbs., \$25.00.
- Mammoth or Large Red Northern.** *Trifolium pratense.* On rich loamy soils this variety grows nearly twice as large as the Medium Red Clover, and earlier to start a spring growth. Per lb., 30 cents; 100 lbs., \$25.00.
- Alsike or Swedish.** *Trifolium hybridum.* This Clover will thrive where the soil is quite wet, and will even stand flooding without being killed. Productive and sweet and extremely valuable for both pasturage or soiling. The flowers afford a fine pasturage for bees. Per lb., 30 cents; 100 lbs., \$25.00.
- White Clover.** *Trifolium repens.* This Clover should always be sown on permanent or temporary pastures. Will grow on any soil, but especially adapted to low meadows, where the surface soil is mellow and rich. Ordinarily will not last more than two years on hard or shallow soil. Sweet and nutritious. Per lb., 25 cents; 100 lbs., \$22.50.

- Alfalfa or Lucerne.** *Medicago sativa.*
The chief merit of Alfalfa is the fact that it can be cut three or four times in a season. The soil should be deep, rich, and well prepared. It does not succeed on compact clay, nor on land with imperious subsoil. The roots shoot downward till they are ten to fifteen feet below the surface, and will therefore resist the driest weather. Per lb., 25 cents; 100, \$22.50.
- Scarlet or Crimson Clover.** *Trifolium incarnatum.* This annual Clover thrives best on warm, loose, sandy soil. Its chief value is as a winter or early spring pasture crop and as a green manure. May be sown at any time from May to October. Per lb., 15 cents; 100 lbs., \$12.00.
- Yellow Trefoil.** *Medicago lupulina.* On very light, dry, or poor ground this variety is valuable for a sheep pasture, and can be sown alone or with other Grasses. Per lb., 15 cents; 100 lbs., \$10.00.

FARQUHAR'S SPECIAL GRASS MIXTURES.

IT is a well-established fact that soils sown with a variety of different grasses which are adapted to the soil and which attain perfection at alternate months from April to September, produce very much larger and more satisfactory crops, both for hay and pasturage, than when only one or two kinds of grasses or clovers are sown. The results given by our mixtures have been most satisfactory, and have resulted in a very large increase in our trade for same. We unhesitatingly recommend them for use on the largest scale. Fall seeding is preferable, but spring sowing will be successful if done early, when the land is cool and moist. In addition to the Grasses, we advise sowing 10 lbs. of mixed Clover Seed per acre. Clovers in their young state are tender in our climate, and should therefore be sown in spring, separately, being heavier in weight.

Sand Vetch, or Hairy Vetch. *Vicia villosa.* This annual is a native of Western Asia, and has been cultivated in this country and Europe for about fifty years. Its desirability as a forage crop has become established, and it is being cultivated each year on a more and more extensive scale. It should be sown at the rate of from four to six pecks per acre, broadcast or in drills, from August 15 to October 1, and with it as a supporting crop to raise the vines up off the ground there should be planted from two to four pecks of winter Wheat, Oats, or Rye. It should be cut while the Vetch is in full bloom. It may be planted in spring in order to supply an early green crop for soiling purposes, or in midsummer for late autumn forage. Per lb., 15c.; 100 lbs., \$12.00.

Rye, Fall or Winter. The time for sowing is from the middle of August to the last of September. Prepare the ground as for Wheat and sow broadcast, or with a drill at the rate of one and one-half bushels per acre. This has no equal as a crop to be used for late fall and early spring pasture, and is one of the best to turn under for green manure. Per bushel, \$1.50.

FERTILIZERS.

Prices subject to change. F. O. B. cars, Boston.

FARQUHAR'S LAWN AND GARDEN DRESSING.

THE best fertilizer in the market for all garden and farm crops. It is as dry and fine as meal; made of dried, finely pulverized blood, bone, potash, and refuse meat. The mixture is in such good mechanical condition that it can be applied conveniently by any one. For gardens and lawns it is most excellent, being not a stimulant merely, but a plant food of lasting, enriching properties. PRICE, per ton, \$50.00.

SCOTCH SOOT.

A FERTILIZER and fungicide. One of the best remedies and preventatives for mildew, when mixed with sulphur, at the rate of two-thirds soot, one-third sulphur. As a fertilizer it promotes growth, and heightens color of foliage and flower. Price, 100-lb bag, \$2.50.

PULVERIZED SHEEP MANURE. (*Purity Brand.*)

A SOLUBLE plant food, highly recommended for all purposes where a first-class fertilizer is required. It is a pure and natural manure, and has long been recognized as one of the most beneficial. As a top dressing for lawns it is unequalled, being free from weed-seeds and extremely stimulating. For lawns, it should be used at the rate of 500 pounds per acre. As a fertilizing agent for plants, in-doors and in the open garden, it is one of the very best.

PRICE, ton, \$40.00; half-ton, \$20.00; 500 lbs., \$10.00; 100 lbs., \$2.50; 50 lbs., \$1.50; 25 lbs., \$1.00; 10 lbs., 50c.; 5 lbs., 30c.; 1 lb., 10c.

PURE CANADA UNLEACHED HARDWOOD ASHES.

PURE wood ashes is one of the best fertilizers for top-dressing lawns, grass lands, and for seeding down; also for fruit of all kinds, especially strawberries, peaches, and apples. They are exceedingly valuable for lawns, imparting a rich, dark shade of green, destroying insects and bad weeds, particularly moss, which is so common on lawns. 100-lb bag, \$1.25; 200 lbs., \$2.00; ton, \$18.00; IN CARLOAD LOTS OF FROM 15 TO 20 TONS, at \$14.00 per ton in bulk, or \$16.00 per ton in 100-lb. bags, delivered at any freight station in Massachusetts, Vermont, New Hampshire, Rhode Island, Connecticut, and to any station in Maine except points on the Maine Central R.R.

PURE GROUND BONE

IS made from the best quality of bone, finely pulverized by improved machinery. It is far superior to some ground bone in the market, which is often composed of refuse bones from which the plant-food has been largely removed in manufacturing glue and other products. Analysis: Nitrogen, equal to Ammonia, 3 to 4 per cent.; Phosphoric Acid, 22.80 to 25.23 per cent.; equal to Bone Phosphate, 50 to 55 per cent. Price per ton in 100-lb. bags, \$30.00; barrel 250 lbs., \$5.00; 100 lbs., \$2.00; 50 lbs., \$1.25; 25 lbs., 75c.; 10 lbs., 35c.

THOMSON'S VINE, PLANT, AND VEGETABLE MANURE.

THOMSON'S Vine and Plant Manure is the result of long experience and experiment. It is so compounded as to combine immediate with lasting effects, and is a perfect food for the Vine and other fruit-bearing plants; also for nearly all other Plants and Vegetables.

PROPORTIONS IN WHICH THE MANURE MAY BE USED.

Vine Border. For making up a Vine Border, $\frac{1}{2}$ cwt. to the ton of loam. For surface dressing Vine Borders, 2 lbs. per yard super, applied early in the season, and 1 lb. per yard super after Grapes are thinned; mix with a little fine soil when roots are quite near the surface; if not very near the surface, sprinkle the manure on and fork it in. In both cases, give a slight watering. See that the thorough watering of the Borders is done some time previous to the top dressing.

Peaches, Nectarines, Figs. For Borders for Peaches, Nectarines, Figs, etc., $\frac{1}{4}$ cwt. to the ton of loam. Original bags, 112 lbs., \$7.00; 56 lbs., \$4.00; 28 lbs., \$2.25; 7-lb. tin, \$1.00.

THOMSON'S SPECIAL CHRYSANTHEMUM MANURE.

THOMSON'S Vine and Plant Manure is admirably adapted for mixing with the soil when potting such plants as Chrysanthemums.

The **Special** Manure is meant to be used as an additional stimulant during the growing season.

A heaped dessertspoonful will be sufficient for a 10-inch pot, sprinkled over the surface of the soil, and watered in with tepid water. This may be given three times during the growing season. 56 lbs., \$7.00; 28 lbs., \$4.00; 14 lbs., \$2.25; 7 lbs., \$1.25.

CLAY'S FERTILIZER.

IMPORTED. A safe, lasting, productive, economical fertilizer for all horticultural purposes. A reliable vitalizing medium for conservatory, greenhouse, and garden. THE CASTLE CIRCULATOR

This new invention greatly accelerates the circulation in any hot-water heating system to which it may be applied. It aids the boiler and increases the heating power of the pipes by driving the hot water rapidly through them.

The Circulator is built in sizes to circulate from 100 to 1,000 gallons per minute and can be readily attached to any system.

Prices on application.

GARDENERS and SUPERINTENDENTS

We are always able to find Competent Gardeners and Superintendents for the management of estates.

We recommend no man unless we know him or have satisfactory reference as to his character and ability. In consequence of this care, the men we recommend rarely fail to give satisfaction. We make no charge to either party for this service.

STRAWBERRY PLANTS.

Strong Pot-Grown Plants.

All the varieties offered are perfect-flowing (bisexual) except where marked P. The latter are pistillate and require a row of a perfect-flowering sort planted every 3 or 10 feet to pollinize their blossoms.

These plants, being grown in pots, may be shipped to a distance and planted with almost no interruption to their growth. The plants may be set in beds of three rows, one foot apart and one foot distant in the rows, with a space of two and one-half feet between the outside rows of adjoining beds left for a pathway. They may also be planted in single rows three feet apart and one foot apart in the rows

Gandy.

Glen Mary.

POT-GROWN PLANTS. From 2¼ in. pots, well rooted; delivery in August and September. Per 100, \$3.00; 250, \$6.50; 500, \$12.50; 1,000, \$25.00, for all varieties, except where otherwise priced.

FIRST EARLY.

Excelsior. This is decidedly the best early Strawberry and the earliest good strawberry. The fruit is of round conical form, glossy, dark red color, and of mildly acid flavor.

Fairfield. Noted for earliness, size, and fine quality.

Success. Large, round, bright scarlet, flavor always fine.

Virginia. P. A medium sized berry of recent introduction; flavor excellent; enormous yielder. Made a record of 12,000 quarts per acre at its home in the State of Virginia.

SECOND EARLY.

Climax. This is an extremely popular new variety, immensely productive, the berries being slightly over medium size. Plant vigorous, healthy grower, of a peculiar shade of green that can be distinguished from other varieties. Our stock is from plants procured from the originator and is exceptionally fine.

Glen Mary. Large, conical, bright red berries; firm and of fine flavor.

Sample. P. Excellent for either market or home use; prolific, large, firm, and delicious.

Senator Dunlap. Mr. Crawford, at the time of its introduction by him, said that he doubted if he had ever sent out a berry better than Senator Dunlap. It will keep in fair condition for several days on the vines after being ripe enough to pick. The fruit is large, rich and dark red, with a very rich flavor.

MEDIUM.

Abington. A strong growing native variety of recent introduction. The fruit is of large size, bright red in color, very solid and of excellent flavor.

Bubach. P. A well known popular variety. Large berries of a rich, bright red color; very prolific.

Big Ben. A new seedling variety of merit which in some sections of this state has become the favorite fancy market sort. The plants are of vigorous growth and very productive with large fruit of a rich crimson color. Per 100, \$4.00; per 1,000, \$35.00.

Brandywine. A large heart-shaped berry, perfect in form, bright red in color, firm flesh, red to the centre, and of rich spicy flavor. A great cropper especially on heavy soils, holds its fruit well up from the ground and generally succeeds everywhere.

Bismarck. Bismarck is a safe pollenizing strawberry, possessing all the desirable qualities of Bubach. To those familiar with the Bubach nothing further need be said, since Bubach has been a favorite berry for years. Bismarck makes a much finer growth than Bubach, and, from the fact that it beds up better, it will generally produce a larger yield per acre. Color a dull

scarlet, ripens all over at once, having no green tips. The seeds are prominent, and the berries quite firm.

Marshall. The fruit of this remarkable sort is of enormous size, of handsome, glossy, dark crimson color, and of delicious flavor. It is one of the best midseason berries either for private use or market. It is a vigorous grower and requires good soil and high cultivation. As it does not thrive in all soils, it should not be planted extensively until its adaptability is ascertained.

Minute Man. P. Very productive, and free growing sort with large solid berries. A fine market variety.

New York. One of the best sorts for private or market gardens. The berries are large, of long conical form; dark red color, firm texture and of remarkably sweet flavor. In the market they sell at sight.

Pride of Cumberland. The plant is a vigorous grower and free from rust, and ripening about one week earlier than Gandy. It is nearly as large, equally firm, as good a color, thriving in either high or low land, but owing to the immense crops it sets, the ground should be well fertilized to ensure best results.

LATE TO VERY LATE.

Belmont. This old favorite is still considered by many to be the finest late berry. The fruit is of handsome appearance and keeps well.

Commonwealth. This is the latest of all Strawberries; bearing large conical, deep crimson fruit, sweet and of quality equal to the well known Bubach. Not only an extra large berry, but also very productive, of deep rich color and solid. It is smooth and quite juicy. The plants are strong, not quite so rank in growth as the Marshall, and free from rust.

Gandy. This popular old variety is probably known by most berry growers. It is more largely grown than any other late variety. It is at home on black swamp land if well drained, upon medium stiff or red clay land. On sandy soils it is unproductive. All late varieties are compared by Gandy, which is the highest praise that could be given it. Large size, fine appearance, and remarkable keeping and carrying qualities.

New Home. As late and large as Gandy, fruit a bright red color that does not lose its lustre and turn dark for a long time after being picked. It is a vigorous grower, and, unlike Gandy, will produce a large crop on either high or low land. The fruit is so firm and keeps so well it does not need to be picked oftener than three times a week. Its great productiveness, uniform large size, and unsurpassed carrying and keeping qualities make it one of the most desirable on the list.

William Belt. An exceptionally fine berry. In quality it heads the list. The berries are as large, with some specimens larger, than the Bubach. It is about as productive as the Bubach, and of nearly the same shape. Its color is a bright, glossy, deep red; its season, nearly as late as Gandy.

Stevens' Late Champion. A new variety of the Gandy type yielding large crops of beautiful berries very late in the season. In New Jersey it is considered one of the finest sorts for late crop.

ALPINE VARIETY.

Large Red Alpine. No one who has eaten the delicious little strawberries of the Alps will ever forget their delicious aromatic

flavor. We are now able to offer this large fruited variety of the Alpine strawberry. Per doz., \$1.00.
